Complete the answers to the questions below to complete your project report. Create a PDF of the completed document and submit the PDF with your project.

Question	Your answer:
Step 2: Domain Choice What domain did you choose to fine-tune the Meta Llama 2 7B model on? Choices: 1. Financial 2. Healthcare 3. IT	IT
Step 3: Model Evaluation Section What was the response of the model to your domain-specific input in the <code>model_evaluation.ipynb</code> file?	 <p>Inputs: A second important aspect of ubiquitous computing environments is</p> <p>Generated Text: > that they are highly mobile. These environments allow users to move from one location to another while still being able to access their applications. The challenge is to provide the user with a consistent interface and to allow the user to access applications and services without the need for a fixed location. This is particularly important for mobile workers.</p>

After fine-tuning the model, what was the response of the model to your domain-specific input in the **model_finetuning.ipynb** file?

[illegible]

Inputs: A second important aspect of ubiquitous computing environments is

Generated Text: > [{"generated_text": "the ability to automatically and seamlessly switch between different computing environments. In this paper we present a system that enables users to automatically switch between a desktop computer and a mobile computing device. We describe a technique to enable users to switch from one device to another without interrupting their activities. We demonstrate the technique by integrating"}]
